DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on Feb 12, 2002; May 23, 2002 and November 02, 2005, have been reviewed the submission is in compliance with the provisions of 37 CFR 1.97. Accordingly, the examiner is considering the information disclosure statement.

Reason for Allowance

2. The following is an examiner's statement of reasons for allowance: In response to the Office action dated June 30, 2005 and further to the amendments filed July 31, 2006, applicant's request in view of the amendments and/or remarks have been reviewed and respectfully considered.

Applicant's response filed on the above-indicated date shows that claims 1-10, 12, 15, 21 and 22 have been cancelled. Claims 11, 13-14, 16-20, 23 and 24 have been amended, and dependent claims 23 and 22, has newly submitted, and therefore, claims 11, 13, 14, 16-20, 23 and 24 are pending in the application.

Applicant's amendment and arguments with respect to independent claim 11, has been carefully reviewed in the light of the prior arts used to reject the application in the last Office action mailed June 30, 2005. Applicant's arguments/remarks as indicated

Art Unit: 2625

on page 6 through 9, are believed to be distinct from the prior arts used to reject the application. The applicant's arguments has been found persuasive in that the prior art used against the claimed invention do not teach or disclose the claimed invention, as indicated in applicant's response page 6 through 9.

Therefore, claims 11, 13-14, 16-20, 23 and 24 are allowed for the reason the prior art searched and of record neither anticipates nor suggests the claimed invention as amended, specifically, with respect to claim 11, the prior art searched and of record neither anticipates nor suggests a scanning device for scanning register marks printed on a substrate, at least one light source illuminating a lighting area on the substrate, the lighting area being an area on the substrate crossed by the register marks, the at least one light source that illuminates the substrate at the lighting area includes means for effecting at least one modulation of at least one of intensity and color of the illuminating light during simultaneous or sequential scanning of at least two of the register marks;

a photosensitive element comprised of a plurality of pixels for receiving traveling images of the register marks wherein the traveling images are projected on a photosensitive element having a plurality of scanning portions that are successively scanned according to a predetermined scanning rate and the pixels produce electric pulses; a microprocessor connected with the at least one light source for controlling the lighting and comprising partly the means for effecting at least one modulation of the light source and for controlling the electric pulses produced by the pixels.

Therefore, independent claim 11 and all dependent claims (13-14, 16-20, 23 and 24) depend therefrom also allowed.
